[A Look Back at IIoT in 2023: Industry Innovations from Semitech Semiconductor](#)

Year end is an ideal opportunity to take a step back and refresh your audience on the value you deliver. For Semitech, the goal was to bring forward their accomplishments into a single story that underscores how their work is at the forefront of Industrial Internet of Things innovation to bring needed cost-effective communications solutions.

Semitech Semiconductor is an innovative provider of robust, high-performance wireless and power line communication (PLC) solutions for the smart grid, automotive and industrial IoT markets. Semitech provides the most adaptable, yet cost-effective, multi-modal communication solutions wirelessly and over power lines to address the diverse requirements of these markets, while avoiding the cost and complexity of additional wiring.
